

Formative Assessment Solutions

Learning Objectives: 11.2.1.6 use data flow diagrams (DFD) to input, process, store and output data in computing systems

1. Process, External Entity, Data Store, Data Flow
2. - Quick and easy division of system into modules.
- Easy to use, doesn't have the algorithms like in a flowchart.
- Can easily see what data our system needs.
- Can easily see what input and output our system needs.
3. - Can be very large and complicated for a big system.
- Doesn't show the algorithms.
